# WinTD 5.0

## Chess Tournament Pairing Software

*Estima*

WinTD is designed to make running a chess tournament as painless as possible. Thanks to its intuitive graphical interface, all of the information you need to run a tournament is presented in a convenient, easily accessible fashion. Operations such as pairing rounds, entering game results, and printing charts require just a few mouse clicks or keystrokes.

The program is also very flexible, giving you a great deal of control over all aspects of the pairing process, including drop/raise decisions, interchanges of players to improve color assignments, and more. You can also customize the displays and printed output to suit your preferences or the particular task at hand, such as displaying a list of all the players in the tournament who haven't paid the entry fee, or who haven't checked in to the tournament.

WinTD is well-suited to any type of tournament, from small scholastic and club events to the largest cash prize tournaments. Support for scholastic tournaments includes the ability to group players by class/grade and support for team competition. You can even export tournament results for online submission to the USCF.

Please visit our web site or contact our offices for more details.

### Some Key Features of WinTD

- Available for both Windows and Macintosh
- Features a very advanced pairing algorithm, which considers the entire section in order to provide optimal pairings and color assignments.
- Supports a variety of pairing systems, including standard Swiss System and Round Robin pairings, FIDE Dutch pairings, various accelerated Swiss pairing methods, and more.
- Handles individual, combined individual/team, and team sections, and multiple games per round
- Easily imports player data from spreadsheets and text files, including section assignment and bye processing.
- Can read data from US Chess and FIDE databases, including finding close matches for misspelled names
- Exports data to many formats, including Excel and HTML
- Can produce FIDE rating reports and tentative FIDE norms.
- Allows choice of any of the US Chess or FIDE ratings for pairings.
- Calculates "local" ratings based on tournament performance, ideal for managing competition within local clubs
